IN DETAIL:

In 1995 he was blown up in a supposedly safe area of a minefield in remote East Africa losing an arm and a leg. He survived initially because he treated himself. About fourteen hours after injury, he arrived in South Africa where doctors said they'd never seen anyone live with such a small amount of blood. He recovered three or four times faster than was expected, was out of hospital in less than two months and within a year of leaving hospital ran the London Marathon, raised significant sums to help disabled people in the developing world, worked to ban landmines and successfully completed a full time Master's Degree.
